

**Citizen Scientist's Names:** Kelsey Kittleson and Alyssa Lindheimer

**Photo of the Bird:**

**Name of Bird:** The Ovenbird

**Latin Name:** *Aurocapillus*

**Bird's Habitat:**

The ovenbird migrates to eastern United States and it also migrates to Mexico to Northern South America. It prefers woodlands with shrubs. The ovenbird likes a mix of primary and secondary forests. In the winter the ovenbird prefers the lowlands.

**Interesting Facts:**

- Chipmunks are the predators to the young ovenbirds.
- They are very territorial!
- They get they're name by the nests they build. It looks like an oven!
- Ovenbirds mostly eat Terrestrial arthropods, snails, and fruit.
- The ovenbird can cross the Atlantic Ocean.
- The ovenbird bobs its tail up and down when it is walking.
- Both parents feed their young.
